Vectors and Linear Transformations

Machine Learning motivation

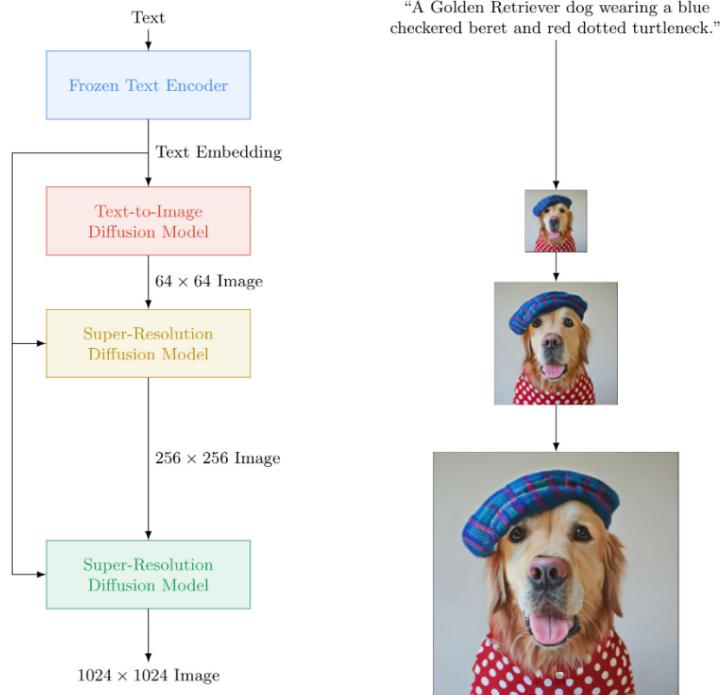

Neural Networks - AI generated images

AI-generated human faces.

- Generative learning: Generating realistic looking images.

Text-to-image and image-to-text generation

"A Golden Retriever dog wearing a blue checkered beret and red dotted turtleneck."

The interface for image-to-text generation shows an input image of a wall clock and a generated caption. The input image is a white wall clock with black hands and markings. The generated text is "wall clock - wall clock." A timestamp of "3.0s" is shown in the bottom right corner.

Pythagorean Theorem

Norms

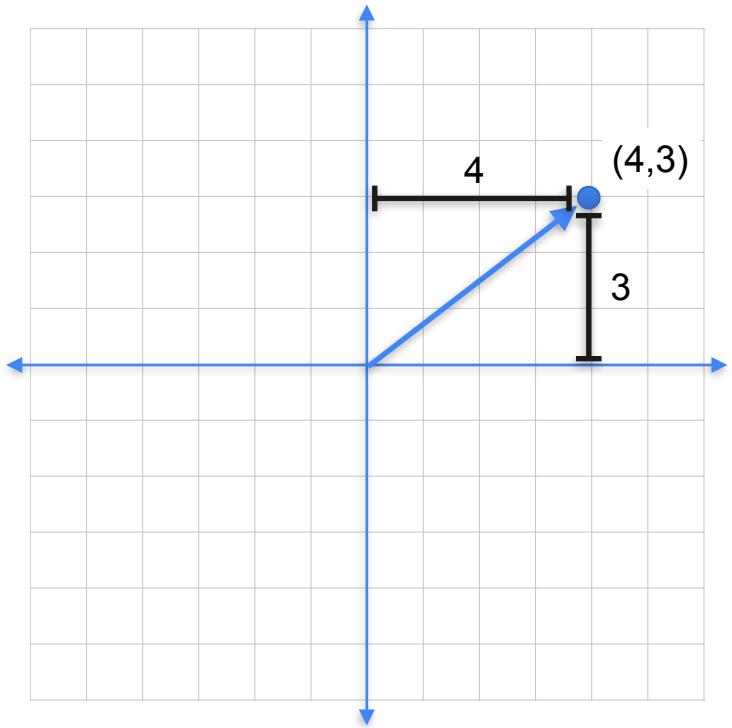

$$\text{L1-norm} = \|(a, b)\|_1 = |a| + |b|$$

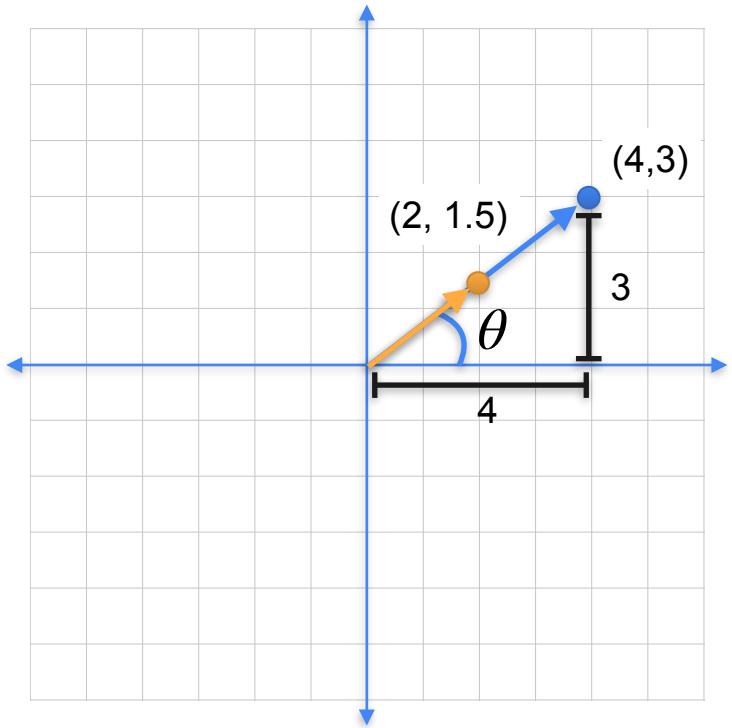

$$\text{L2-norm} = \|(a, b)\|_2 = \sqrt{a^2 + b^2}$$

Norm of a vector

$$\sqrt{4^2 + 3^2} = \sqrt{25} = 5$$

Direction of a vector

$$\tan(\theta) = \frac{3}{4}$$

$$\theta = \arctan(3/4) = 0.64 = 36.87^\circ$$

**Sum and difference of
vectors**

Sum of vectors

$$u + v = (4 + 1, 1 + 3) = (5, 4)$$

Difference of vectors

$$u - v = (4 - 1, 1 - 3) = (3, -2)$$

General definition: sum and difference

Same number
of components

$$x = (x_1 \quad x_2 \quad \dots \quad x_n)$$
$$y = (y_1 \quad y_2 \quad \dots \quad y_n)$$

Sum

$$x + y = (x_1 + y_1 \quad x_2 + y_2 \quad \dots \quad x_n + y_n)$$

Sum component by component

Difference

$$x - y = (x_1 - y_1 \quad x_2 - y_2 \quad \dots \quad x_n - y_n)$$

Subtract component by component

Multiplying a vector by a scalar

Multiplying a vector by a scalar

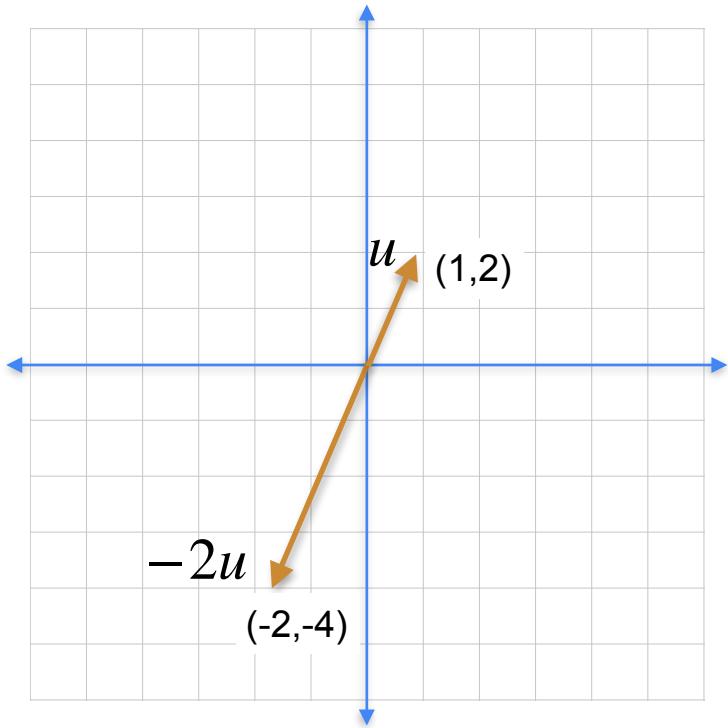

$$u = (1, 2)$$

$$\lambda = 3$$

$$\lambda u = (3, 6)$$

If the scalar is negative

$$u = (1, 2)$$

$$\lambda = -2$$

$$\lambda u = (-2, -4)$$

General definition

Multiplication by a Scalar

$$x = (x_1 \quad x_2 \quad \dots \quad x_n)$$

$$\lambda x = (\lambda x_1 \quad \lambda x_2 \quad \dots \quad \lambda x_n)$$

The dot product

The diagram shows two vectors being multiplied. The first vector, on the left, is represented by a blue grid with three rows. The top row contains two red apples, the middle row contains four yellow bananas, and the bottom row contains one red cherry. To the right of this grid are its corresponding numerical values: 2, 4, and 1, stacked vertically. A multiplication sign follows this vector. To the right of the multiplication sign is a second vector, represented by a teal grid with three rows. The top row contains one red apple with a dollar sign, the middle row contains one yellow banana with a dollar sign, and the bottom row contains one red cherry with a dollar sign. To the right of this grid are its corresponding numerical values: 3, 5, and 2, stacked vertically. An equals sign follows this vector, and finally, the result of the multiplication is shown as '\$28'.

$$\begin{matrix} \text{apple} \\ \text{banana} \\ \text{cherry} \end{matrix} \begin{matrix} 2 \\ 4 \\ 1 \end{matrix} \cdot \begin{matrix} \text{apple} \\ \text{banana} \\ \text{cherry} \end{matrix} \begin{matrix} 3 \\ 5 \\ 2 \end{matrix} = \$28$$

$$(2 \times 3) + (4 \times 5) + (1 \times 2) = 28$$

The dot product

The diagram shows two vectors of fruits being multiplied. The first vector (left) contains 2 apples, 4 bananas, and 1 cherry. The second vector (right) contains the prices of these fruits: \$3 for an apple, \$5 for a banana, and \$2 for a cherry. The result of their multiplication is \$28.

$$\bullet d = 5/8$$

Quiz

- Find the inverse of the following matrix. If you find that the task is impossible, feel free to click on “I’m reaching a dead end”

1	1
2	2

Solutions

- The inverse doesn't exist!

We need to solve the following system of linear equations:

$$\begin{array}{|c|c|} \hline 1 & 1 \\ \hline 2 & 2 \\ \hline \end{array} \quad \begin{array}{|c|c|} \hline a & b \\ \hline c & d \\ \hline \end{array} \quad = \quad \begin{array}{|c|c|} \hline 1 & 0 \\ \hline 0 & 1 \\ \hline \end{array}$$

$$a + c = 1$$

$$2b + 2d = 1$$

$$2a + 2c = 0$$

$$b + d = 0$$

This is clearly a contradiction, since equation 1 says $a+c=1$, and equation 3 says $2a+2c=0$.
